

# Current Situation

People arrive at their destination and start looking for parking spaces in the blocks near their destination

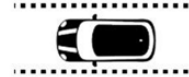

Time wasting, wandering vehicles on the road deteriorate the driving environment and increase road congestion.

Eliminating the method of driving along the street to find a space

Based on the prediction, the app generates a suggested route to the block where the space is likely to be available.

People arrive near their destination block and **Super Finder** helps users predict parking occupancy in blocks within 100-200miles based on arrival time.

# Our Method

Drivers go to the possible empty spots directly.

Reduces search times and street congestion
